China's Pollution Problem

- Rapid economic growth model: industrialize first, clean up later

- Pollution is the main cause of social unrest in China, with 30,000 to 50,000 mass protests every year
- 80% of Chinese surveyed believe environmental protection should be a higher priority than economic development

China Declares War on Pollution

“Environmental pollution has become a major problem which is nature’s red-light warning against the model of inefficient and blind development. (...) We must strengthen protection of the ecological environment and resolve to take forceful measures.”

- Chinese Premier Li Keqiang, 2014

flickr @ leniner

1970s U.S. Flammability Standards that needed to be updated

- Children's sleepwear
- Furniture
- Foam plastic building insulation

20世纪70年代美国的阻燃标准需要被更新

- 儿童睡衣
- 家具
- 泡沫塑料建筑保温材料

Brominated Tris Flame Retardant

Tris (2,3-dibromopropyl) phosphate

- In children's sleepwear 1975 to 1977
- Up to 10% of the weight of fabric
- In children's urine
- Mutagen and possible carcinogen

溴化Tris阻燃剂

三(2,3-二溴丙基)磷酸酯

- 被添加到儿童睡衣 1975 to 1977
- 达到织物重量的10%
- 在儿童尿液中被检测到
- 基因突变和可能的致癌物质

Flame-Retardant Additives as Possible Cancer Hazards

The main flame retardant in children's pajamas is a mutagen and should not be used.

Arlene Blum and Bruce N. Ames

防火阻燃剂有导致癌症的危险

儿童睡衣中添加的阻燃剂可能导致畸变，应该被禁止

**U.S. Consumer Product
Safety Commission**

TRIS-Treated Children's Garments Banned

April , 1977

Chlorinated Tris replaced Brominated Tris

- Removed from pajamas in 1978
- Used in furniture until 2012

U.S. Consumer Product Safety Commission

美国消费品企业安全委员会

添加了TRIS的儿童的服装被禁止

1977年4月

氯化的Tris取代溴化的Tris

- 1978年从睡衣中去除
- 应用于家具，直到2012年止

Technical Bulletin 117

- Furniture foam must withstand a small open flame for 12 seconds
- No significant fire safety benefit (fires start in exterior fabric not filling)

技术公告117

- 家具泡沫塑料必须能够承受持续12秒的小明火
- 没有显著消防安全效益（大火从外部面料开始而不是内部）

Animal health effects

- Chronic toxicity: long term impacts
 - Endocrine disruption: Interfere with thyroid hormones
 - Neurodevelopment: Decreased memory, learning deficits, hyperactivity
 - Reproductive system effects: Reduced ovarian follicles, reduced sperm count, infertility
 - Immune suppression
 - Cancer

动物健康的影响

- 慢性毒性：长期影响
 - 内分泌紊乱：干扰甲状腺激素
 - 神经发育：记忆力减退, 理解力下降, 多动症
 - 生殖系统的影响：卵泡减少, 精子数量减少, 不孕不育
 - 免疫抑制
 - 癌症

Human Health

Higher pentaBDE

associated with

lower birth weight
impaired attention
poorer coordination
lowered IQ

longer time to get pregnant
altered thyroid hormones

Eskenazi et al, 2010, 2011, 2012

人类健康

高浓度 pentaBDE

与其关联

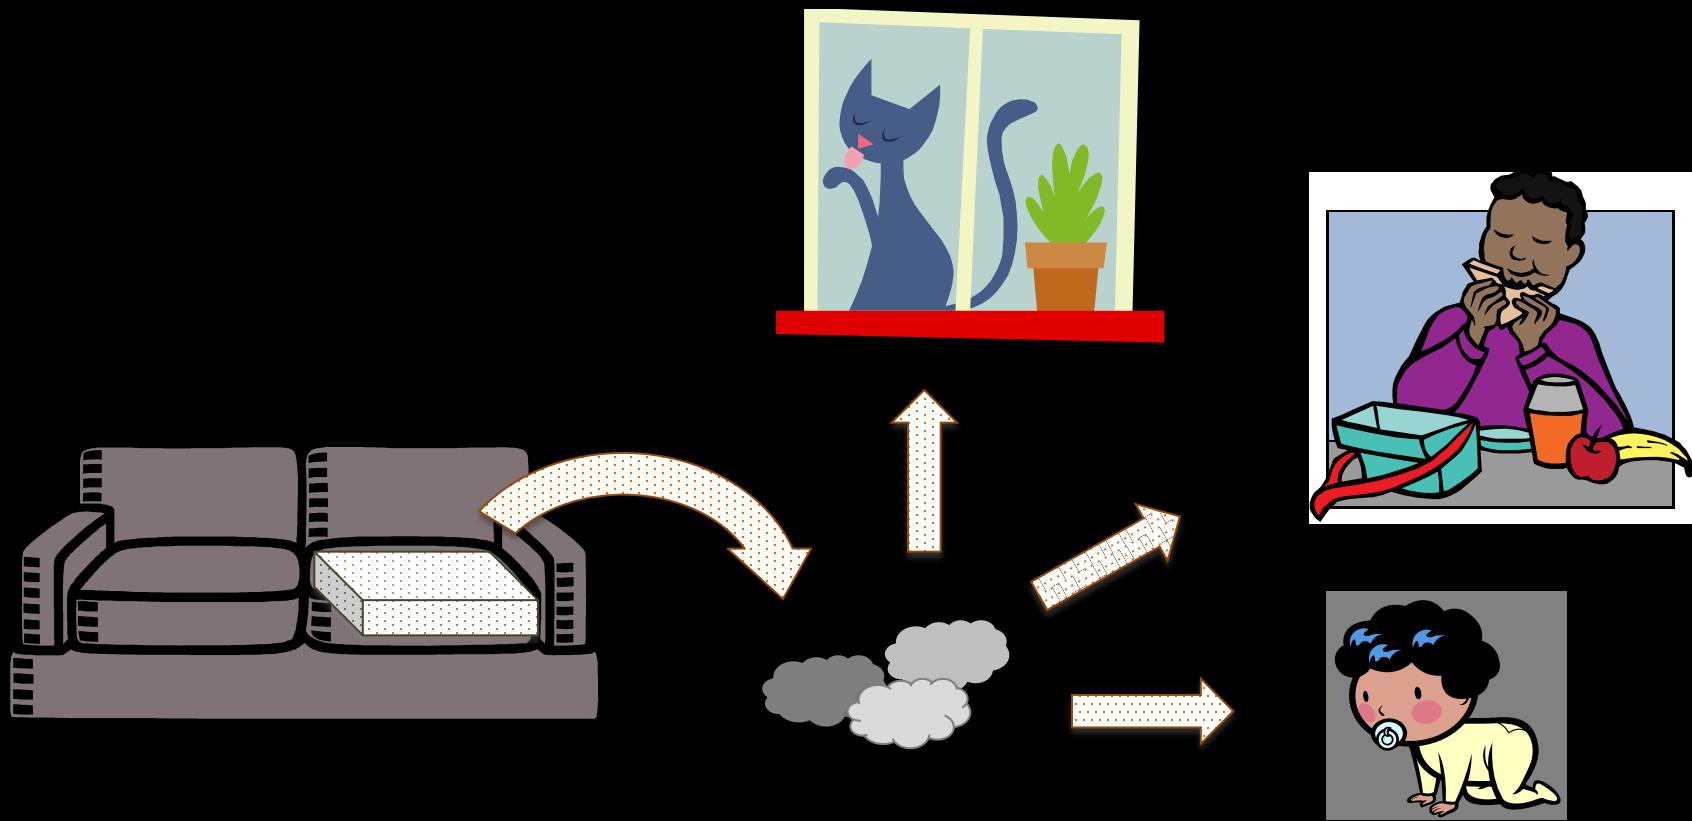

出生时较小的体重
注意力受损
身体协调能力差
智商较低

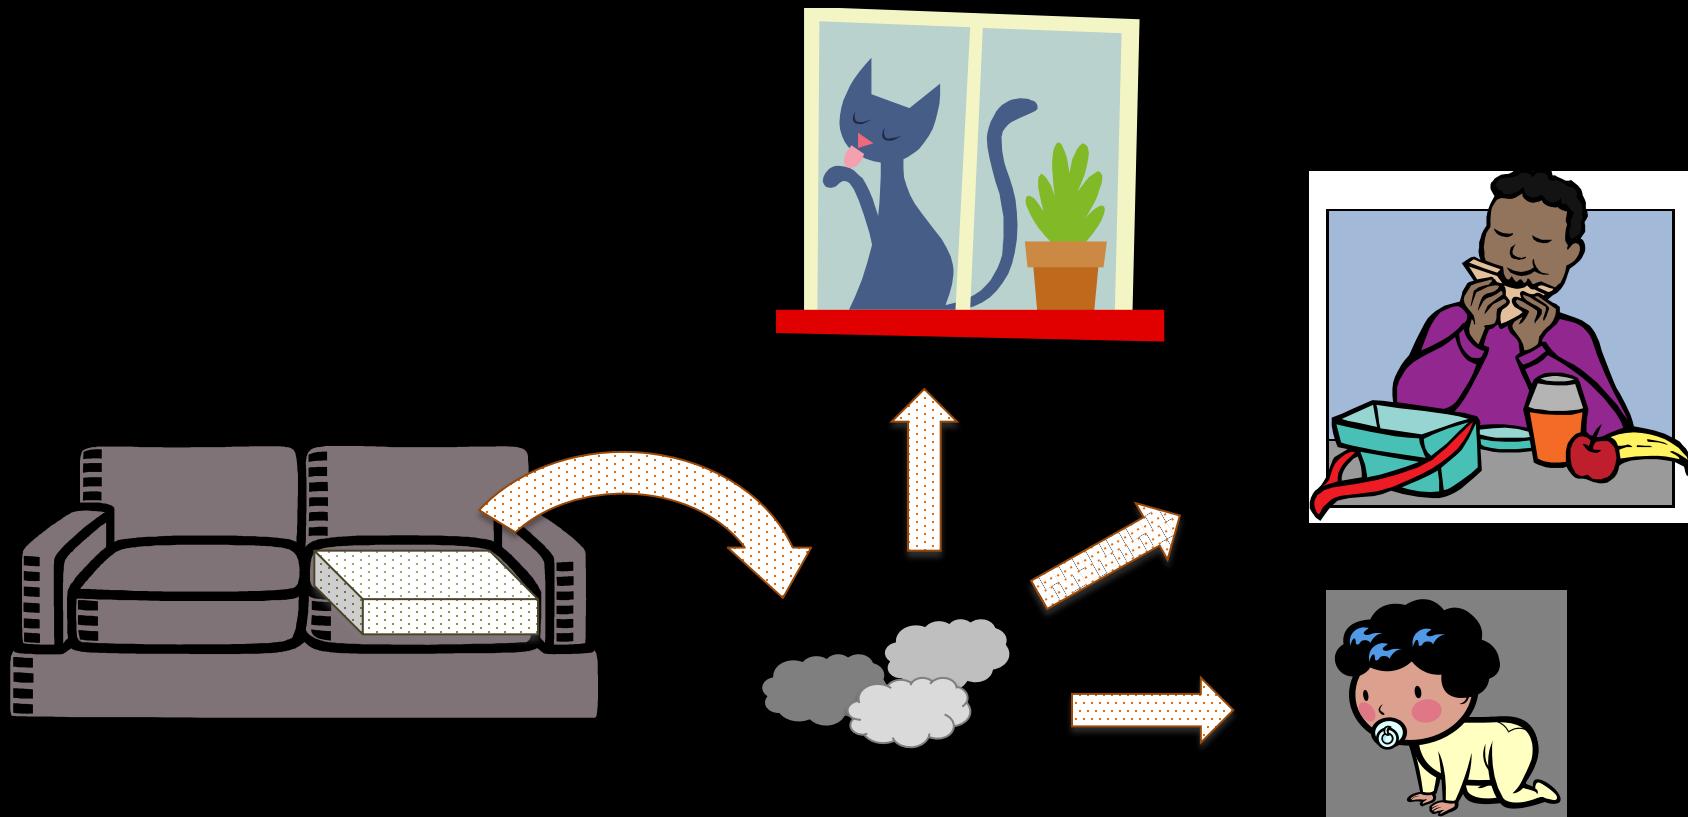

需要更长时间才能怀孕
由于改变的甲状腺激素水平

TRIBUNE WATCHDOG

Playing with fire

A deceptive campaign by industry brought toxic flame retardants into our homes and into our bodies. And the chemicals don't even work as promised.

BY PATRICIA CALLAHAN AND SAM BOE
Tribune reporters

Dr. David Heimbach knows how to tell a story. Before California lawmakers last year, the noted burn surgeon drew gasps from the crowd as he described a 7-month-old baby girl who was burned in a fire started by a candle while she lay on a pillow that lacked flame retardant chemicals.

"Now this is a tiny little person, no bigger than my Italian greyhound at home," said Heimbach, gesturing to approximate the baby's size. "Half of her body was severely burned. She ultimately died after about three weeks of pain and misery in the hospital."

Heimbach's passionate testimony about the baby's death made the long-term health concerns about flame retardants voiced by doctors, environmentalists and even firefighters sound abstract and petty.

But there was a problem with his testimony. It wasn't true. Records show there was no dangerous pillow or candle fire. The baby he described didn't exist.

Neither did the 9-week-old patient who Heimbach told California legislators died in a candle fire in 2009. Nor did the 6-week-old patient who he told Alaska lawmakers was fatally burned in her crib in 2010.

Heimbach is not just a prominent burn doctor. He is a star witness for the manufacturers of flame retardants.

His testimony, the Tribune found, is part of a decades-long campaign of deception that has loaded the furniture and electronics in American homes with pounds of toxic chemicals linked to cancer, neurological deficits, developmental problems and impaired fertility.

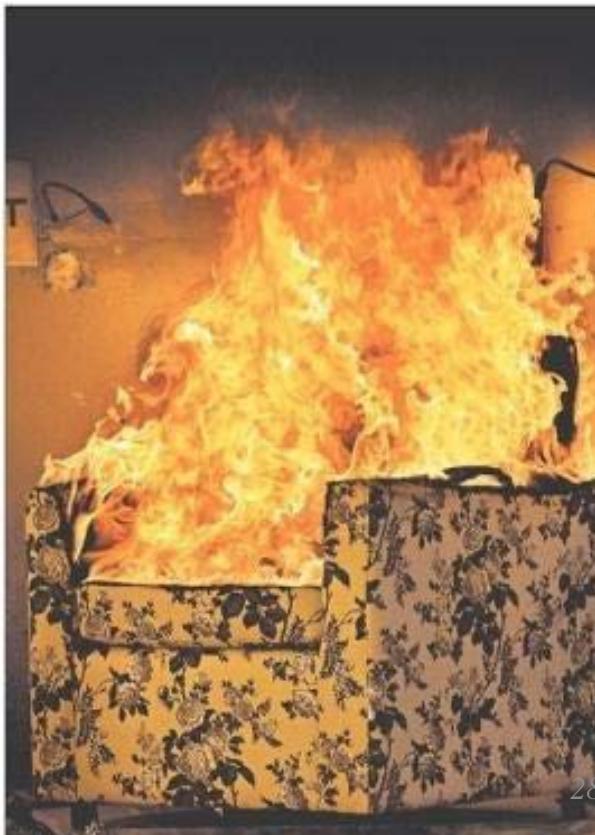

The tactics started with big Tobacco, which wanted to shift focus away from cigarettes as the cause of five deaths, and continued as chemical companies worked to preserve a lucrative market for their products, according to a Tribune review of thousands of government, scientific and internal industry

stoked the public's fear of fire and helped organize and steer an association of top fire officials that spent more than a decade campaigning for their cause.

Today, scientists know that some flame retardants escape from household products and settle in dust. That's why toddlers, who play on the floor and put things in their mouths, generally have far higher levels of these chemicals in their bodies than their parents.

Blood levels of certain widely used flame retardants doubled in adults every two to five years between 1970 and 2004. More recent studies show levels haven't declined in the U.S., even though some of the chemicals have been pulled from the market. A typical American baby is born with the highest recorded concentrations of flame retardants among infants in the world.

People might be willing to accept the health risks if the

Conformity, January 2009

Foam Plastic Insulation

(polystyrene, polyurethane, polyiso, etc.)

Used increasingly for energy efficiency

Can be used:

- inside walls
- below grade
- attics, etc.

泡沫塑料隔热材料 (聚苯乙烯, 聚氨酯, 多异, 等等.)

由于节约能源而使用率大大增加

可以用于:

- 内壁
- 地下保温层
- 阁楼, 等等.

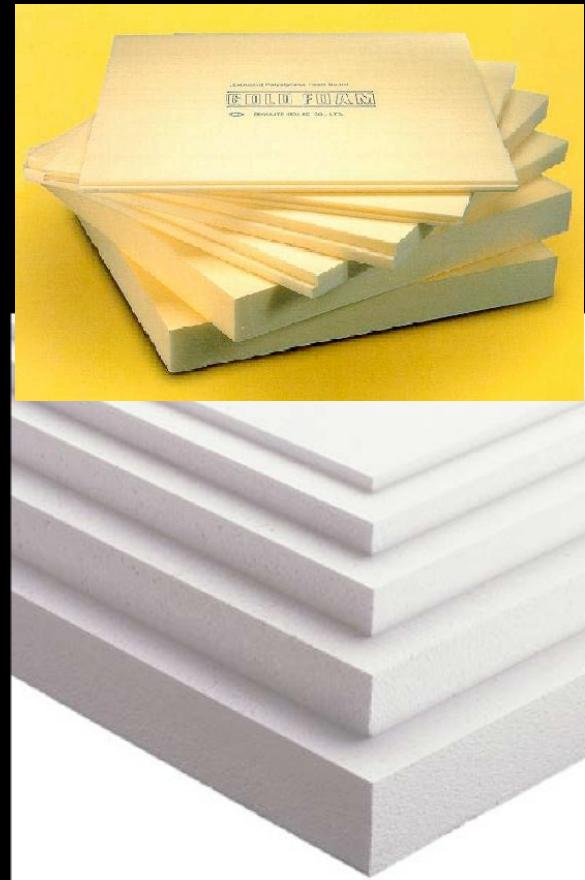

HBCD

(hexabromocyclododecane)

HBCD:

- Bioaccumulative
- Thyroid disruption
- Affects developing nervous system
- Developmental neurotoxicity in mice
- Banned in 160 countries

Polystyrene
(XPS and EPS)

Covaci et al, 2006; Marvin et al, 2011; US EPA 2008

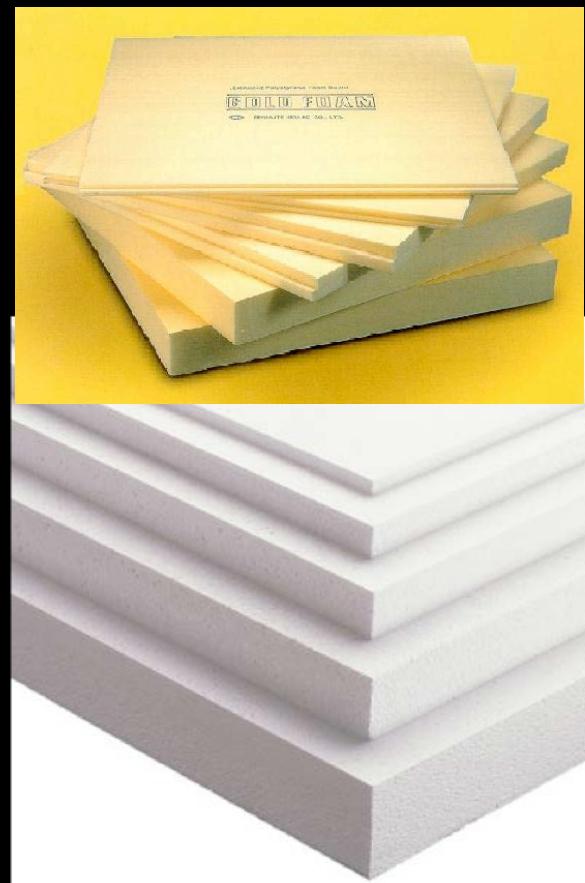

HBCD

(六溴 环十二烷)

HBCD:

- 生物富集性
- 甲状腺破坏
- 影响神经系统发育
- 在小鼠中发现发育神经毒性
- 在160个国家被禁止

Polystyrene
(XPS and EPS)

Covaci et al, 2006; Marvin et al, 2011; US EPA 2008

HBCD is a persistent organic pollutant (POP)

Protecting human health and the environment
from persistent organic pollutants

19 October 2012, Geneva— A UN expert body has recommended that the industrial flame retardant hexabromocyclododecane (HBCD) be eliminated from the global marketplace to protect human health and the environment.

HBCD 是持久性有机污染物 (POP)

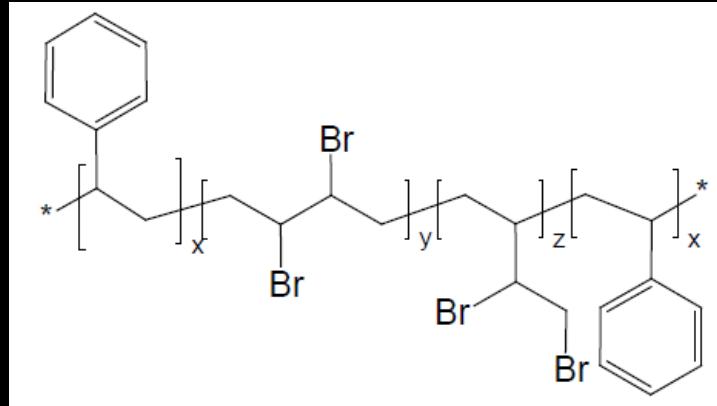

STOCKHOLM
CONVENTION
